

## Chess vs Mobile Gaming

### *Why Chess is Better for Brain Development in Kids*

#### **Introduction**

In today's digital era, mobile gaming has become one of the most common activities among children. While gaming may provide entertainment, excessive screen time and addiction to mobile games often affect concentration, academic performance, discipline, and mental growth.

#### **1. Chess Improves Brain Power While Mobile Gaming Often Distracts**

Most mobile games are designed for quick excitement and instant rewards. Chess trains the brain to think deeply, analyze situations, plan ahead, and stay focused for longer periods.

#### **2. Chess Enhances Academic Performance**

Chess supports subjects like Mathematics, Science, logical reasoning, and problem-solving. Students who play chess regularly often become more attentive and disciplined learners.

### **3. Chess Reduces Screen Addiction**

Long hours of mobile gaming can reduce concentration and affect healthy learning habits. Chess provides a productive and intelligent alternative that keeps children mentally active.

### **4. Chess Develops Patience and Emotional Control**

Chess teaches patience, discipline, emotional control, and strategic thinking. Children learn to think before acting and handle pressure calmly.

### **5. Chess Encourages Real Learning and Social Interaction**

Chess tournaments and classroom sessions encourage confidence, sportsmanship, leadership skills, and healthy social interaction among students.

### **Why Schools in Delhi NCR Prefer Chess Programs**

Schools across Rohini, Indirapuram, Noida, Dwarka, Gurgaon, and Faridabad are increasingly introducing chess programs because chess improves concentration, classroom discipline, and logical thinking skills.

### **Sckoolchess – Chess Program for Schools in Delhi NCR**

Sckoolchess offers online and offline chess coaching programs for students aged 5–15 years, including school chess curriculum, tournaments, and structured chess training.

### **Conclusion**

While mobile gaming may provide temporary entertainment, chess builds long-term intelligence, concentration, discipline, and confidence in children. Sckoolchess is committed to helping children move from screen addiction to intelligent learning through structured chess education.
